

1. Group Anagrams

Given an array of strings `strs`, group the [anagrams](#) together. You can return the answer in **any order**.

Example 1:

Input: `strs = ["eat","tea","tan","ate","nat","bat"]`

Output: `[["bat"],["nat","tan"],["ate","eat","tea"]]`

Explanation:

There is no string in `strs` that can be rearranged to form "bat".

The strings "nat" and "tan" are anagrams as they can be rearranged to form each other.

The strings "ate", "eat", and "tea" are anagrams as they can be rearranged to form each other.

Example 2:

Input: `strs = [""]`

Output: `[[""]]`

Example 3:

Input: `strs = ["a"]`

Output: `[["a"]]`

Constraints:

- $1 \leq \text{strs.length} \leq 10^4$
- $0 \leq \text{strs}[i].\text{length} \leq 100$
- `strs[i]` consists of lowercase English letters.

PROGRAM

```
import java.util.*;
```

```
class Solution {
```

```
    public List<List<String>> groupAnagrams(String[] strs) {
```

```
        Map<String, List<String>> map = new HashMap<>();
```

```
        for (String s : strs) {
```

```
            char[] chars = s.toCharArray();
```

```
            Arrays.sort(chars);
```

```
            String key = new String(chars);
```

```

if (!map.containsKey(key)) {

    map.put(key, new ArrayList<>());

}

map.get(key).add(s);

}

return new ArrayList<>(map.values());

}

}

```

OUTPUT

The screenshot displays the LeetCode submission interface for the 'Group Anagrams' problem. The submission is marked as 'Accepted' with 129/129 testcases passed. The user 'VTU30221' submitted the solution on September 18, 2026, at 09:03. The solution is written in Java and is 8ms in runtime, beating 34.35% of other submissions. The memory usage is 49.65 MB, beating 60.06% of other submissions. The test result section shows the input and output for a specific test case, with the output matching the expected result.

Runtime: 8 ms | Beats 34.35%

Memory: 49.65 MB | Beats 60.06%

Testcase: Accepted Runtime: 0 ms

Case 1: Case 2 Case 3

Input:

```
strs = ["eat","tea","tan","ate","nat","bat"]
```

Output:

```
[["eat","tea","ate"],["bat"],["tan","nat"]]
```

Expected:

```
[["eat","tea","ate"],["bat"],["tan","nat"]]
```
